

CHIKEZIE ILODIGWE

Full-Stack Engineer - React / Next.js / React Native / Node.js / TypeScript

Enugu, Nigeria - +234 813 930 8197 - dikee5200@gmail.com - [Portfolio](#) - [GitHub](#) - [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack engineer with 3+ years of hands-on experience taking products from concept to production - across web, mobile, and backend. Strong across the MERN stack with solid Next.js, React Native, TypeScript, and Node.js experience. Currently building ONCE, a zero-knowledge encrypted messaging platform with x25519 key exchange and hardware-backed identity management. Comfortable working across the full delivery pipeline - from system design and API architecture to CI/CD, Docker, and cloud deployments. I write clean code, collaborate well, and ship things that actually work.

TECHNICAL SKILLS

Frontend: React.js, Next.js 14, React Native (Expo), TypeScript, Tailwind CSS, NativeWind, Redux Toolkit, Zustand, Styled Components

Backend: Node.js, Fastify, Express.js, RESTful APIs, WebSockets, JWT Auth, Refresh Token Rotation, Rate Limiting

Databases: PostgreSQL (Supabase), MongoDB, Redis (TTL/Ephemeral Queues), Mongoose, Prisma ORM, SQL (working knowledge)

Security: x25519 Diffie-Hellman, AES-GCM, ChaCha20-Poly1305, AES-256, Zero-Knowledge Architecture, Biometric Auth, Cloud Security

DevOps & Tools: Docker, CI/CD Pipelines, Git, GitHub, Vercel, Expo, Postman, ClickUp, Paystack

PROFESSIONAL EXPERIENCE

Backend Engineer

Dec 2024 - Jun 2025

Genesys Tech Hub - Learnable Backend Engineering Program - Enugu, Nigeria

- Built and maintained scalable RESTful APIs using Node.js and Express.js - owning everything from endpoint design and auth logic to MongoDB schema modeling. Worked within a cross-functional team to deliver secure, well-documented APIs that frontend engineers could integrate without friction, applying Docker and CI/CD practices to keep deployments consistent.
- Set up JWT authentication with access/refresh token rotation, multi-session support, route-level authorization, and rate limiting - hardening every exposed endpoint against brute force, token replay, and credential stuffing across cloud-hosted environments.

Frontend Engineer

Dec 2023 - Jun 2024

Genesys Tech Hub - Learnable Frontend Engineering Program - Enugu, Nigeria

- Built reusable React component systems wired up to live APIs - translated design mockups into responsive, accessible interfaces that held up across 5+ browsers and every major screen size, with close attention to rendering performance and component reusability throughout.
- Worked closely with backend engineers and designers inside ClickUp sprint cycles, consistently shipping clean, cross-browser compatible features on schedule without cutting corners on code quality.

KEY PROJECTS

ONCE - Ephemeral Cyber-Vault - React Native / Fastify / PostgreSQL / Redis / TypeScript / x25519 / AES-GCM / Docker - Private Repo - iOS & Android

- Building a zero-knowledge encrypted messaging platform where the relay server is cryptographically blind - it never sees plaintext, keys, or unencrypted metadata. Every x25519 Identity Key is generated on-device inside hardware-backed SecureStore and never transmitted. Messages are encrypted per recipient device, queued in a Redis TTL buffer, then permanently deleted the moment delivery is confirmed. Runs inside Docker for clean, portable cloud deployment.

- On the mobile side, built an OLED-optimized interface (#050505) using Expo, Moti animations, and haptic navigation - with a tiered trust system (Amber/Cyan/Purple), QR Handshake verification, FaceID/Fingerprint biometric lock, and a Paystack-backed premium tier for Elite Node users.

MyCyberClinics - Telehealth Platform - *React Native / React.js / NativeWind / REST APIs - Private Repo - Web, Android & iOS*

- Built a full cross-platform telehealth application covering web, Android, and iOS from a single codebase. Used React Native and NativeWind for mobile and React.js for the web client, keeping the UI consistent and responsive across all three surfaces while securely integrating backend APIs for appointments, patient data, and protected medical records.

Twelvet Educational Services - *Next.js 14 / Tailwind CSS / Vercel - Live - velvet-ochre-one.vercel.app*

- Designed and delivered this one from start to finish - multi-page routing, service sections, WhatsApp CTA, contact form, newsletter signup, and SEO-optimized static rendering. Deployed to Vercel with a zero-downtime CI/CD pipeline and Next.js image optimization for fast global load times.

Real Trift - E-commerce Platform - *React / Redux Toolkit / Styled Components*

- Built a scalable e-commerce frontend with Redux Toolkit handling cart, product catalog, user auth, and transaction state across the app. Designed the component system for easy feature expansion without breaking existing flows - fully responsive across all device sizes with secure client-side data handling throughout.

Bank Account API with Virtual Card - *Node.js / Express.js / MongoDB / AES-256 / JWT*

- Designed and shipped a secure banking API supporting full virtual card operations - AES-256 encryption on all financial data, JWT-based auth, and role-based access control enforced at the route level. No sensitive endpoint is reachable without proper token validation and authorization checks in place.
- Built the data layer with MongoDB schemas designed specifically for financial data integrity and query efficiency, with clear separation between account management, card operations, and transaction history endpoints.

Secure Authentication API - *Node.js / Express.js / MongoDB / JWT*

- Built a hardened, reusable auth system with JWT access/refresh token rotation, multi-device session tracking, and rate limiting - designed to resist brute-force, token replay, and credential stuffing attacks. Token issuance, session management, and route protection are cleanly separated so the system is easy to drop into other projects.

Note-Taking API - *Node.js / Express.js / MongoDB / JWT*

- Developed a fully authenticated CRUD REST API with JWT-protected, user-scoped resources - each user can only access their own notes. Focused on writing efficient MongoDB queries and designing a schema that stays performant as data grows, with clean route organization and proper error handling throughout.

EDUCATION & TRAINING

Backend Engineering - Learnable Cohort 2024 - Genesys Tech Hub, Enugu - Dec 2024 - Jun 2025

Frontend Engineering - Learnable Cohort 2023 - Genesys Tech Hub, Enugu - Dec 2023 - Jun 2024

ADDITIONAL

Availability: Open to remote-first full-time and contract engineering roles. Available immediately.

Private Repos: ONCE and MyCyberClinics available upon request with NDA if required.
